

## Development of image-based tracking software for animal tracking (2)

YAMANAKA Osamu (Meiji University, MIMS)

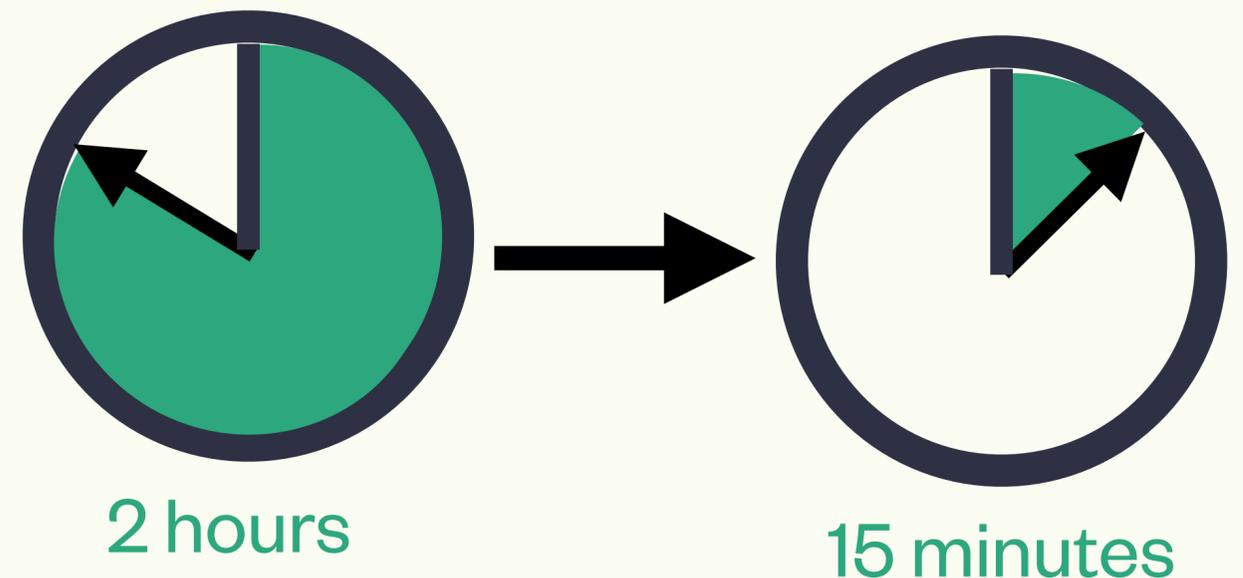

To quantitatively investigate the movement of animals, image-based tracking software are used as valuable tools. Ordinarily tracking software consist of manual tracking tool and automatic tracking tool. Manual tool is time-consuming for the operation, and fully automatic tracking tool strongly limits the experiment conditions. Thus, we developed a semi-automatic tracking software. In this poster, I will explain the features of our software and actual cases of use.

### Project Webpage

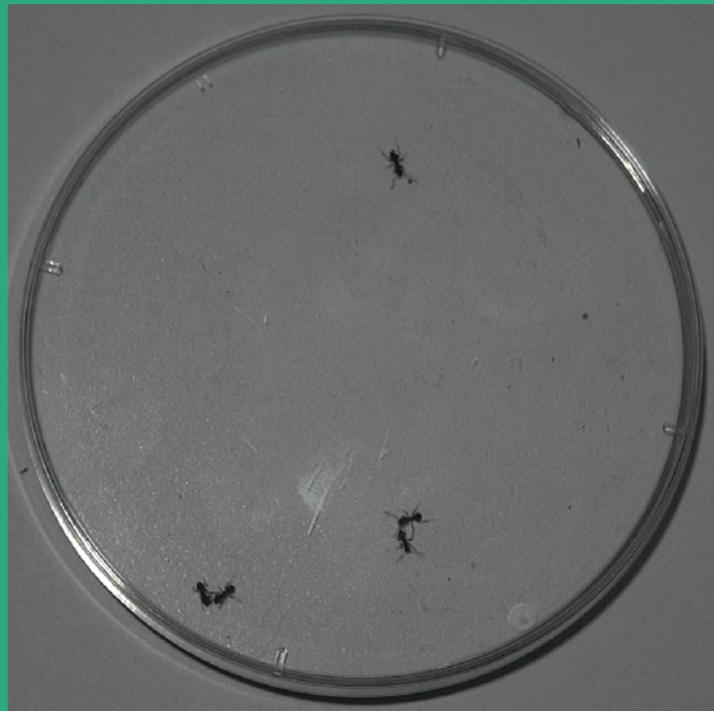

<http://ymnk13.github.io/UMATracker/>

Improving the operation efficiency in  
the analysis of animal behavior.

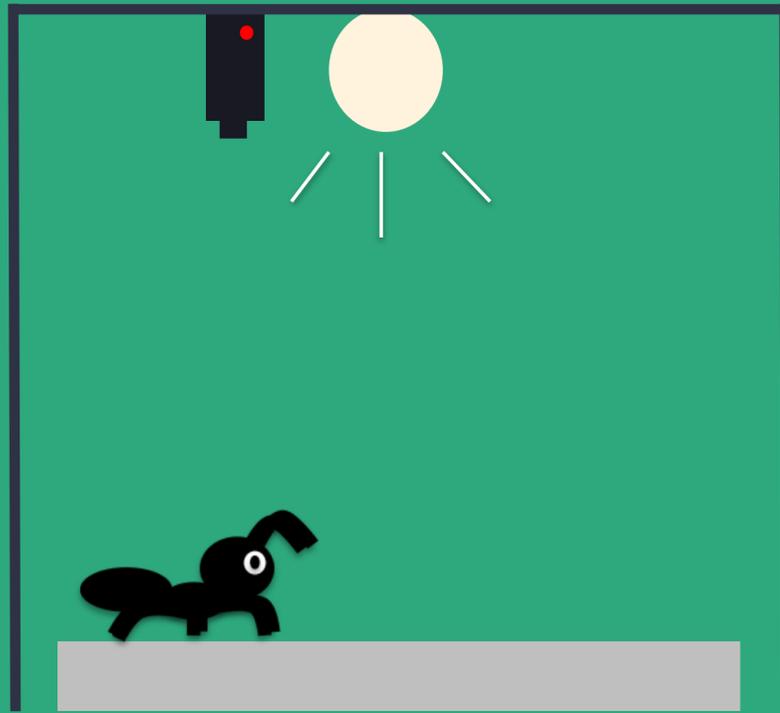

The operation can be accomplished in  
**a short time.**

# Motivation

## Problem

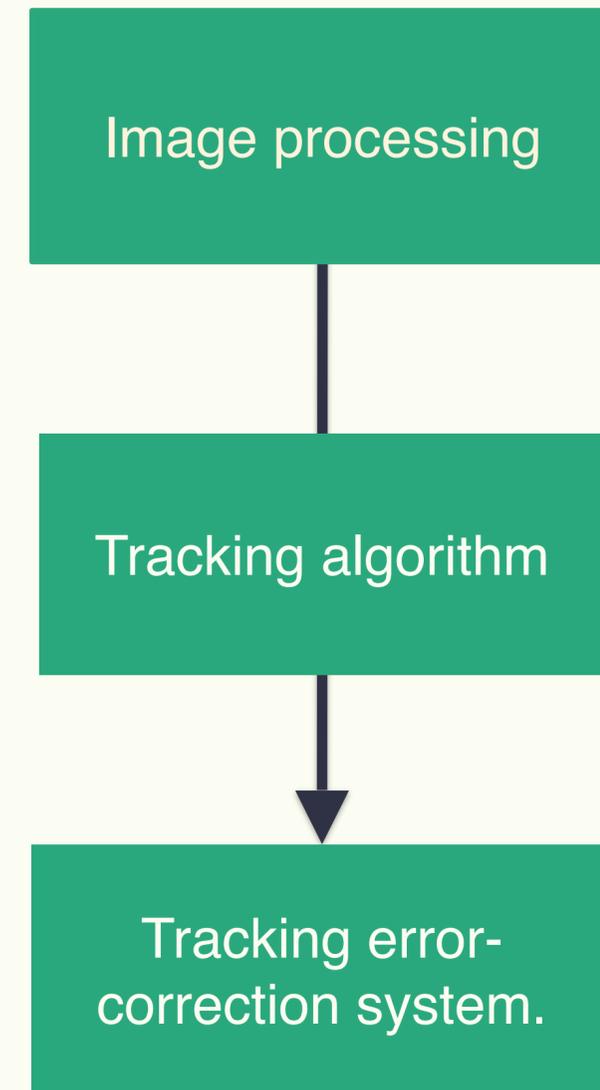

**“It takes two hours to extract the position coordinate of animals in two minute videos.”**

We developed the image-based tracking software.

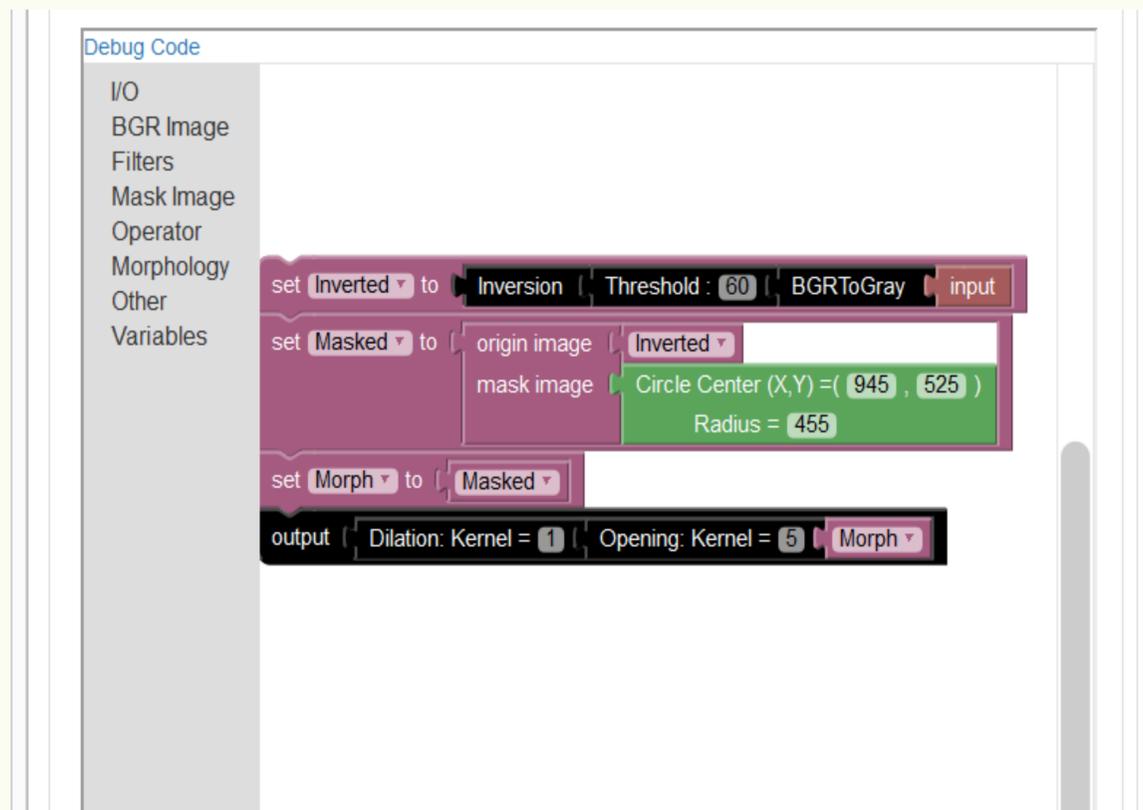

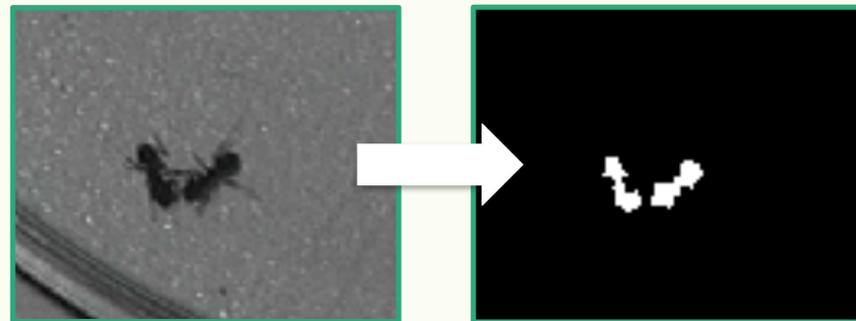

**Our software accomplish the task in 15 minutes.**

# Our proposed approach

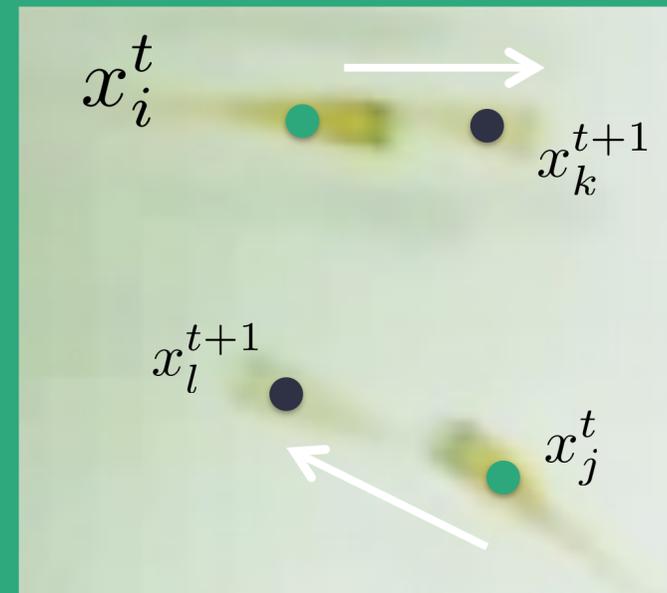

1. The user without expertise can be accomplish the task.
2. The tracking algorithm work without system error.
3. A user should be able to rectify tracking errors manually and directly when errors occur.

# Image processing

**The user design the image processing using the visual programming environment.**

# Tracking algorithm

The distances of two animals

$$\frac{1}{1 + \|x_i^t - x_j^{t+1}\|}$$

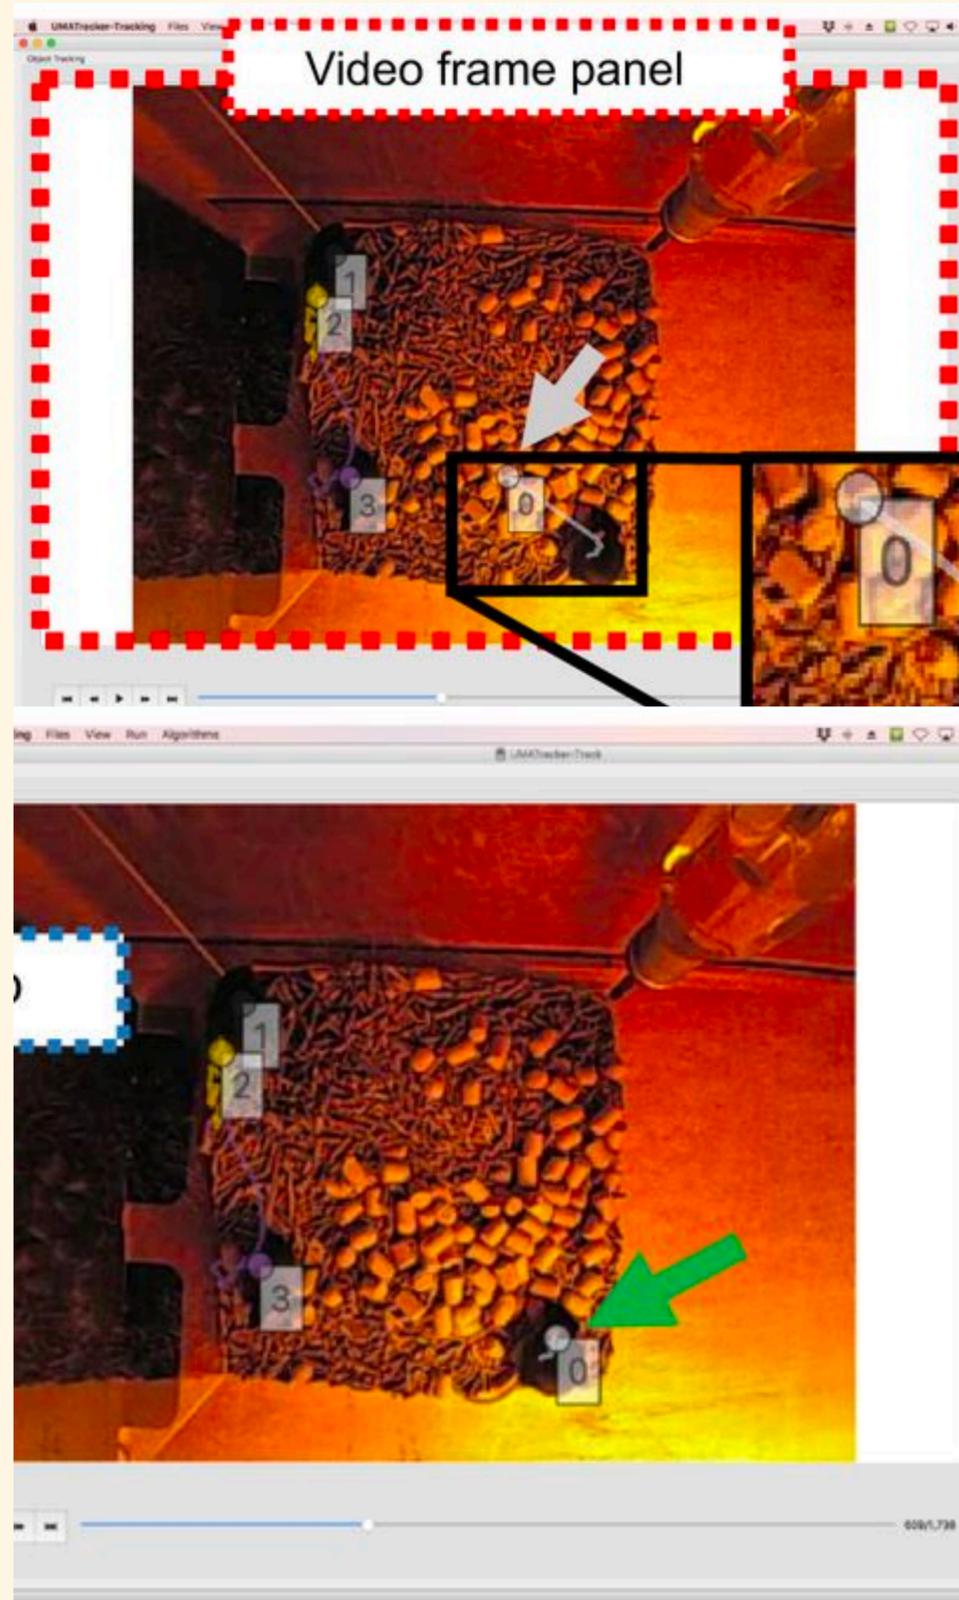

The shape similarity

$$w_i^t = (\sigma_x, \sigma_y)$$
$$\frac{w_i^t \cap w_j^{t+1}}{w_i^t \cup w_j^{t+1}}$$

Based on the similarity of two index, the algorithm identify animals in each video frames.

# Tracking error-correction system

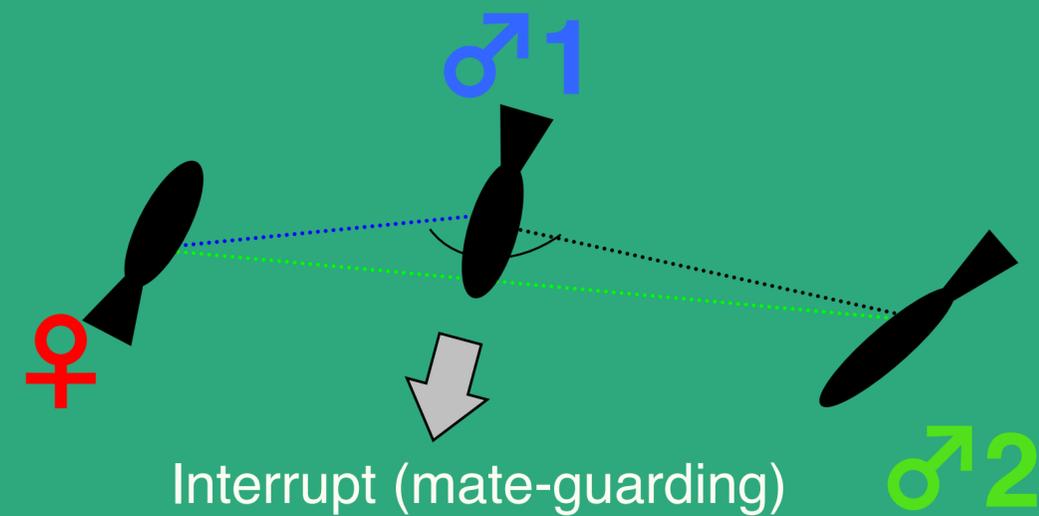

# Analysis of Mate-guarding behavior

Mate-guarding behavior: they remain near a (potential) mating partner and repel their rival males.

# Users

## Conclusion

The user accomplished the task in about 15  
minutes to extract position coordinates of  
animals in 2 minutes video.

- Our software provides useful user interfaces.
- The users employ our software in various experiment environments.
